PROFESSIONAL SUMMARY

Software Development Engineer with 4+ years of experience building distributed systems, production monitoring applications, and Python automation across multi-region AWS infrastructure. Reduced incident response time by 50%, latency by 20%, and manual operational work by 10+ engineer-hours per week. Experienced in network troubleshooting, telemetry analysis, CI/CD, architecture reviews, and reliable software delivery.

PROFESSIONAL EXPERIENCE

Software Development Engineer | ViaSat Inc | Remote (HQ: Carlsbad, CA)

Jan 2023 – Present

- Developed distributed Python automation for incident management across multi-region AWS infrastructure, reducing incident resolution time by 40% and eliminating 10+ engineer-hours of manual work per week.
- Engineered a real-time anomaly detection and remediation pipeline processing 200+ weekly network events using Splunk APIs and GitHub Actions CI/CD, reducing incident response time by 50%.
- Investigated complex production network issues using telemetry, analytics, and SLA metrics, improving network stability by 15% and reducing latency by 20%, contributed findings to postmortems and architecture reviews.
- Collaborated with engineers and stakeholders on architecture trade-offs and reviewed code for accuracy, testability, and efficiency, used GitHub Copilot to accelerate implementation.

Technical Lead | Doodleblue Innovations | Chennai, India

Aug 2020 – May 2021

- Architected offline storage and Crashlytics crash-analysis capabilities across 5+ client applications, reducing user downtime by 40% and data loss incidents by 30%.
- Established secure AWS configuration practices, technical documentation, and pre-production testing protocols, achieving 80% adoption and supporting reliable releases and 2x repeat client intake.

Software Development Engineer | Doodleblue Innovations | Chennai, India

Aug 2019 – Aug 2020

- Designed a distributed monitoring application using TypeScript, Next.js, and Prisma ORM, integrated real-time satellite beam and weather visualization, improving issue resolution efficiency by 25%.
- Re-architected, deployed, and maintained a scalable platform across 15+ web integrations, enabling 2x faster root-cause correlation and improving user satisfaction by 40%.

KEY PROJECTS

Advanced DevOps Monitoring Application | TypeScript, Next.js, Distributed Systems

- Built a scalable satellite network monitoring platform with real-time infrastructure observability and global map visualization, delivering 2x faster infrastructure issue correlation.

Automated Audit & Notification System | Python, JIRA APIs, Database Publications

- Developed a Python notification service integrating Jira APIs and database publications, reducing manual workload by 60%, improving ticket compliance by 70%, and reducing post-deployment rule violations by 35%.

AI Assisted Network Anomaly Detection | Python, Splunk APIs, GitHub Actions, CI/CD, Prompt Engineering

- Built anomaly detection processing 200+ weekly network events, used prompt engineering and LLM-assisted debugging to support investigation and automated CI/CD-triggered remediation to reduce manual intervention by 20%.

EDUCATION

M.S., Computer Science and Systems | University of Washington, Tacoma, WA

Dec 2022

B.S., Computer Science | Anna University, College of Engineering, Guindy, India

May 2019

TECHNICAL SKILLS

- Programming Languages:** Python, Java, TypeScript, JavaScript, SQL, Kotlin, C++ through coursework and personal projects.
- Cloud & Systems:** AWS, GCP familiarity, distributed computing, cloud storage, caching, data locality, offline storage.
- Reliability:** Production troubleshooting, incident management, telemetry analysis, root-cause analysis, Splunk APIs, Crashlytics.
- Automation & Delivery:** GitHub Actions, CI/CD, Python automation, Jira APIs, pre-production testing.
- Engineering & Tools:** System design, unit testing, code review, technical documentation, Git, Agile/Scrum, Next.js, Prisma ORM.
- AI-Assisted Development:** GitHub Copilot, Claude, prompt engineering, LLM-assisted coding and debugging.
